Summary

AWS-certified Cloud & DevOps Engineer, currently at Senior Sistemas. I work with cost optimization, architecture and decision-making, CI/CD pipelines, security, observability and production incident response, with a background in infrastructure support and software engineering.

Professional Experience

Cloud & DevOps Engineer II - Senior Sistemas ***05/26 - present***

- Lead AWS cost optimization: in 2026, cloud costs were 52% below budget and 35% lower than in the same period of 2025.
- Built an observability dashboard for the background job queues (Celery), key to finding the report generation bottleneck; after the fix, generation time dropped by up to 93%.
- Lead critical incident response in production, with root cause analysis (RCA) and preventive measures.
- Support cloud architecture decisions and work with development teams on observability and continuous delivery.

Cloud & DevOps Engineer I - Senior Sistemas ***10/25 - 04/26***

- Led the application's stabilization after a critical production incident, tuning the ECS deploy strategy, health checks and application workers, which eliminated slowdowns and container crashes during deploys.
- Started the AWS cost reduction effort, cutting the monthly cloud cost by 40% in the first three months.
- Migrated repositories from Bitbucket to GitHub and rebuilt the CI/CD pipelines with GitHub Actions.
- Implemented cloud security best practices, focusing on access management and resilience.

Software Engineer - ENX Services ***05/24 - 07/25***

- Developed and maintained scalable web applications using TypeScript, JavaScript, React.js, Next.js, Node, Tailwind CSS, Java, Python and PHP.
- Collaborated with cross-functional teams to analyze requirements and improve system performance.
- Participated in code reviews, documentation and adoption of best practices for version control and CI.

Infrastructure Support Analyst - ENX Services ***05/21 - 05/24***

- Administration and monitoring of servers (Linux/Windows), including environment configuration and resource management.
- Log analysis and incident diagnosis for efficient problem resolution.
- Level 1/2 technical support, assisting clients via chat, ticket and email.

Skills

- **Cloud (AWS):** ECS, RDS/Aurora, SQS, SES, Redis, IAM, WAF, CloudWatch, S3, CloudFront, Lambda, EventBridge
- **Infra & DevOps:** Terraform, Docker, CI/CD (GitHub Actions), Grafana, Linux, Git
- **Programming:** Python, SQL, JavaScript, TypeScript, Node, React, Java

Education and Certifications

- Bachelor of Software Engineering - PUC Minas ***2022 - 2026***
- AWS Certified Solutions Architect Associate (SAA-C03) - Amazon Web Services ***2025***
- Full Stack Development Bootcamp ***2022***

Cloud Projects

Infra as code (Terraform + AWS): Automated modular deployment (VPC, ALB, ASG, RDS Multi-AZ), reducing provisioning time by 85%.

Serverless Log Analyzer: CloudTrail monitoring with AWS Lambda + EventBridge, processing thousands of events per day with real-time reporting.

CodeFlow: GitHub Actions pipeline with automated deployment to S3 + CloudFront, performing cache invalidation in seconds with zero downtime.

Portfolio Website: Multilingual responsive app (Next.js/React), hosted on AWS S3 + CloudFront with optimized SEO.
